ECI Pricing System for Piping Works, Volume 2

Description: Why should you use the ECI Pricing System when you already have your own system in place?
A perfectly sensible question. However, the Piping Pricing experts that have seen a number of good returns for implementing the ECI Pricing System, since existing systems do not offer you all of the following:
- Separation of direct and indirect costs
- The possibility to separate piping production cost from erection cost (to cater for separate contracts)
- Instantaneous comparison to base prices/operations and related to our new variable per operation
- Full representation of effects from quantity variations and from complexity variations (through piping complexity, weight/height ratio)
- The possibility of being Manual Take off (MTO) and Invoicing Bill of Material (BOM) data for erection pricing
- Allow basic price agreement at a very early stage for pre-selection of potential partners
- Architectural files with supporting data collection systems, progress measurement data collection systems and historical data collection systems
- Provide the complete change administration
The ECI Pricing System offers all of the above features. This document explains how it works.
The system includes a spreadsheet or CD-ROM, it is not a ready made software package, but it is simple enough to integrate the system in any company's existing software.
Since the first edition a number of modifications have been made to better support further enhancement of the execution work processes that interface with the system. The system includes a spreadsheet with modifications in CD-ROM (2005).
